PROFESSIONAL SUMMARY

I have spent 14 years in telecom MIS and data analytics, and for the last two years I have been teaching myself AI automation by building real projects. I build AI agents, chatbots, and multi-step n8n/Make workflows that connect CRMs, databases, and business tools through REST APIs and webhooks, using OpenAI, Claude, and Gemini, prompt engineering, and RAG. My MIS work taught me process mapping, data quality, and reporting, so I know which processes are worth automating and how to measure the result. I am now looking for my first professional role in this field.

PROFESSIONAL EXPERIENCE

AI Automation & Workflow Engineer — Independent Practice **2024 – Present**

- Build AI automation workflows in n8n and Make that connect CRMs, databases, email, messaging, and web apps.
- Build AI agents and chatbots on OpenAI, Claude, and Gemini APIs, using prompt engineering, tool calling, and structured JSON outputs.
- Connect systems through REST APIs and webhooks, handling authentication, data mapping, pagination, and JSON transformation.
- Set up RAG pipelines on Airtable, Supabase, and Postgres/pgvector so agents answer from the business's own data.
- Map each process before automating it, and add error handling, retries, deduplication, validation, logging, Telegram alerts, and human approval steps where needed.

MIS & Data Analytics Executive **2012 – Present (14 Years)**

Leading Telecom Organization

- Prepare MIS and KPI reports for management across business units and check large volumes of operational data for accuracy.
- Automate recurring reports with Excel VBA and advanced formulas, which cuts manual work and reduces errors.
- Build Power BI and Excel dashboards for operations and leadership, and use Claude in Excel and Microsoft Copilot to write formulas, VBA macros, and data transformations, which saves hours of manual work.
- Work with operations teams to improve processes and keep data quality consistent.

SKILLS & TECHNICAL EXPERTISE

Core Focus: AI Automation, Workflow Engineering, Business Process Automation, Process Mapping, CRM Automation, Data Analytics, MIS Reporting

Automation & AI: n8n, Make.com, Zapier, OpenAI API, Claude, Gemini, AI Agents, AI Chatbots, Tool Calling, Prompt Engineering, Structured JSON Outputs, RAG / Knowledge Bases

APIs & Integration: REST APIs, Webhooks, JSON, API Authentication (keys / OAuth), Data Mapping & Transformation, Pagination, Gmail API, Telegram Bot API, WhatsApp Business API

Workflow Engineering: Error Handling & Retries, Conditional Branching, Deduplication & Validation, Human-in-the-Loop Approval, Scheduling & Triggers, Multi-Tenancy & Session Isolation, Logging & Alerting

Databases & Tools: Python, SQL (self-taught), Postgres/pgvector, Supabase, Airtable, Google Sheets, WordPress, GitHub

Analytics & AI in Excel: Power BI, Advanced Excel, VBA, Power Pivot, Pivot Tables; Claude in Excel and Microsoft Copilot for AI-assisted analysis, formula generation, VBA debugging, data cleaning, and MIS/KPI insights

KEY PROJECTS

CRM AI Agent

Two agents that handle leads from first contact to reply. The outreach agent researches each Airtable lead (website scrape, Google Search/Maps) and decides whether to send a personalised cold email or skip it. The reply agent reads Gmail, works out what the sender wants, answers simple replies, and sends pricing or meeting questions to me on Telegram. *n8n, LLM tool-calling agents, Airtable, Gmail API, Telegram Bot API.*

Customer Data Pipeline Dashboard

A Python pipeline that loads synthetic e-commerce data into a cloud MySQL database over SSL. I designed a normalized four-table schema with primary and foreign keys and used seeded, bulk parameterized inserts. Five SQL queries (joins, aggregates, a subquery) show revenue, top customers, and repeat rate on a live Streamlit dashboard that uses a read-only DB user. *Python, SQL, MySQL, Streamlit.*

Enterprise Knowledge Base RAG & AI Support Agent

A RAG system built as two workflows. The first splits company documents into chunks, embeds them, and stores them in Postgres/pgvector, skipping files that haven't changed. The second finds the most relevant chunks, checks there is enough to answer, replies only from that content, and passes anything it can't answer to a person on Telegram. *n8n, embeddings, Postgres/pgvector, LLM APIs, Telegram.*

AI Lead Generation Automation

Finds B2B leads by scanning job boards (Arbeitnow, Jobicy, RemoteOK, Hacker News) for companies that need automation help. A keyword filter runs first, then one Gemini model scores each lead out of 100 and a second model plays a sceptical reviewer that can reject it. Only leads that pass both go into the CRM. *n8n, Gemini API, multi-stage LLM evaluation, Airtable.*

AI Email Classification & Auto-Reply Workflow

A Gemini agent sorts each incoming email into promotional (archived), important (sent to Telegram), or needs a reply, returning strict JSON. Draft replies come to Telegram with buttons, so one tap sends the email through Gmail or discards it. The signature is added in code so the AI can't get it wrong. *n8n, Gemini API, Gmail API, Telegram Bot API.*

Multi-Tenant WhatsApp AI Agent

One workflow that serves several WhatsApp business clients. The receiving number tells it which client a message is for, and it loads that client's prompt and knowledge base from Supabase. Gemini answers only from that data and hands over to a person when unsure. Each chat's memory is kept separate using a client + customer session key. *n8n, Gemini API, Supabase, WhatsApp Business API.*

CERTIFICATIONS

Meta Back-End Developer Professional Certificate • AI Automation Engineer with n8n • Generative AI Foundations • Google AI Essentials • Microsoft Power BI • Advanced MS Excel • Excel VBA & Macros • Data Analytics

EDUCATION

B.A. and Post Graduate Diploma in Computer Application — Gauhati University 2012

LANGUAGES

English • Hindi • Assamese
